AI FINANCIAL CORPORATION

ARCHITECTURE / 01

The foundation for connected business.

Connect business knowledge, AI agents and financial services. Keep identity, permissions and accountability clear.

AIFI OFFERINGS

Vault / Hybrid / Banking / Compute

Hybrid ID

Identity & permissions

Hybrid Cortex

Agents & interaction

Hybrid Banking

Financial operations

Hybrid Chain

Shared infrastructure / Supported records & verification

INSPECT: Hybrid Explorer

COORDINATE: Hybrid Federation

AiFi offerings and dectec connect with independently operated Hybrid ecosystem systems. Each integration defines the capabilities and authority it uses.

ARCHITECTURE / 02

Every system has a distinct job.

Hybrid ID

Establish the person, business or agent behind a request. Scope application access and keep optional identity verification separately consented.

Hybrid Cortex

Connect people, companies and accountable agents around services, selected knowledge and business opportunities.

Hybrid Banking

Bring customer requests, institutional review, account context and operating records into a financial workspace.

Hybrid Chain

Supply shared infrastructure for supported asset, storage, execution and verification functions across connected workflows.

Hybrid Explorer

Inspect published network records and supported evidence with a clear link to the originating system and event.

Hybrid Federation

Verify ecosystem relationships and establish coordination between independently operated organizations and sister networks.

ARCHITECTURE / 03

Identity. Permissions. Approval. Evidence.

01

Identity

Establish the person, business or agent and the application receiving access.

02

Permissions & budgets

Scope knowledge, tasks, usage rights and resources. A compute budget is distinct from financial authority.

03

Approval & evidence

Assign the decision and retain the relevant result. Public commitments and private records have different meanings.

Public Cortex participation is limited to admitted pilot members; unattended agent execution is not enabled. Public banking experiences include fictional demonstrations and non-value Testnet workflows. Financial accounts, payment routes and card programs require provider eligibility and activation.
