KNOWLEDGE / DECTEC + TWIN VAULT

AiFi Vault

A defined knowledge collection, access model and application workflow built around your organization’s information.

01

A structured knowledge scope

Identify the documents, media, records and expertise relevant to the first use case.

02

An explicit access model

Define the people, applications and agents allowed to use each collection and for what purpose.

03

A connected AI experience

Scope how Twin Vault context reaches an approved assistant, twin or business application.

04

An operating handoff

Agree content ownership, updates, access reviews and the way outputs will be evaluated.

Availability & scope: Discuss a Twin Vault walkthrough and a scoped knowledge engagement. Source selection, application connectivity and deployment requirements are agreed for each organization.

AI FINANCIAL CORPORATION

FINANCIAL CONNECTIVITY / PAYMENTS + SETTLEMENT

AiFi Hybrid

A clearly scoped route from an authorized business instruction to provider confirmation and reconciliation.

01

A mapped financial workflow

Define the instruction, destination, currencies, operating window and information required.

02

A provider connection scope

Identify the financial institutions or specialist providers responsible for the chosen services.

03

Approval and exception controls

Agree who authorizes the instruction and how incomplete, rejected or delayed results are handled.

04

A reconciliation model

Link the provider’s confirmation and references to the underlying business record.

Availability & scope: Start with the route and market your business needs. Provider access, supported assets, API scope, settlement timing and operating requirements are confirmed for the engagement.

AI FINANCIAL CORPORATION

FINANCIAL OPERATIONS / HYBRID BANKING + STRADACARTE

AiFi Banking

A coordinated client and institution journey, with defined financial providers, review controls and reconciliation responsibilities.

01

A customer journey

Map onboarding, consent, service requests and the information clients need at each step.

02

An institutional workflow

Give operating teams a defined review path, exception process and record of decisions.

03

An integration and record model

Agree which system owns each record and which provider executes each financial instruction.

04

An optional card-program scope

Define Stradacarte issuer, market, funding, spending and servicing requirements for the program.

Availability & scope: The public Hybrid Banking experience includes demonstrations and non-value Testnet workflows. Financial accounts, multi-currency services and cards require the relevant provider agreements, eligibility and activation.

CAPACITY / MODELS + BUSINESS APPLICATIONS

AiFi Compute

A scoped workload and capacity plan, with defined data access, usage terms and application responsibilities.

01

A workload specification

Define the business question, model requirements, expected outputs and evaluation criteria.

02

A capacity and usage scope

Agree provider capacity, allocation, usage rights and commercial requirements.

03

A permissioned context connection

Identify which information the workload may use and who controls that access.

04

A review and operating plan

Assign output review, usage records, support and any subsequent business approval.

Availability & scope: Infrastructure, capacity and offtake engagements are scoped with the participating provider. Application acceptance includes data permissions, output evaluation and usage responsibilities.
